

Name

- For the ODE $y'' + 2y' + 26y = 0$

- Write down the gen sol.

$y_c(t) =$

- Describe the solution as $t \rightarrow \infty$

As $t \rightarrow \infty$

1. For the ODE $y'' + 2y' + 26y = 0$

- 1.1. Write down the gen sol.

$y_c(t) =$

- 1.2. Describe the solution as $t \rightarrow \infty$

As $t \rightarrow \infty$

- For the ODE $y'' - 2y' - 24y = 0$ with $y(0) = 10$ and $y'(0) = 10$

- Write down the solution

$y_c(t) =$

- Describe the solution as $t \rightarrow \infty$

As $t \rightarrow \infty$

2. For the ODE $y'' + 5y' + 6y = 0$ with $y(0) = 0$ and $y'(0) = 3$

- 2.1. Write down the solution

$y_c(t) =$

- 2.2. Describe the solution as $t \rightarrow \infty$

As $t \rightarrow \infty$
